India Health Fund

The **India Health Fund (IHF)** is an initiative by Tata Trusts, in collaboration with the Global Fund. It is to financially support innovations and technologies designed to combat tuberculosis and malaria. The IHF aims to support new products and strategies that impact the entire lifecycle of TB and malaria, from prevention to post-cure recovery.

The funds will support the long-term exercise aligned with the country’s goal of **eliminating TB by 2025 and malaria by 2030**. The two diseases account for over 4.23 lakhs deaths and around 15 million lab-confirmed cases every year.
