Mount Mayon

- It is an active **stratovolcano** in the Philippines region.
- Stratovolcano, also known as a composite volcano, is a conical volcano built up by many layers of hardened lava, tephra, pumice, and volcanic ash.
- The volcano is the centre piece of the ALBAY biosphere reserve and Natural Park on its own.
- Mount Mayon lies in Pacific ring of fire region, major area in the basin of the Pacific Ocean where a large number of earthquakes and volcanic eruptions occur.
